Derived from: phosphoric acid, ammonia, potassium hydroxide, urea, zinc EDTA, ammonium thiosulfate

CAUTION: This fertilizer contains zinc and should be used only as recommended. It may prove harmful when misused.

It is not recommended for Season Pass products to be mixed with 28% or 32% nitrogen.

PRODUCT INFORMATION: Season Pass® Plus GoldStart is a high quality starter placed directly on the seed of your corn plant at a low volume rate with a non-corrosive material. This provides more timely and hassle free plantings. It also delivers an 80/20 ratio of ortho- to polyphosphate fertilizer that your corn needs to maximize yields during this critical stage. With five gallons of Season Pass Plus GoldStart, you will be placing 10 lbs. of phosphorus in furrow to feed the plant, maximizing corn yield.

DIRECTIONS FOR USE: Use in accordance with recommendations of a qualified individual/institution. Do not mix with calcium based fertilizers. Soil Application: Apply in-furrow, 2x2, or at sidedress or topdress. Do not apply directly on the seed in saline, alkali, or coarse textured soils. Foliar Application: Fill spray tank with water prior to adding fertilizer or other products. Use only as a supplement to a regular nutrient management program. Repeat applications may be beneficial. Use only as directed to avoid foliar burn. Do not apply to plants that are excessively stressed for moisture or during periods of high temperatures. Use of a surfactant may enhance leaf coverage and increase nutrient absorption.

RECOMMENDED RATES: This product should be used on the basis of a soil and/or tissue analysis. Suggested application rates are for one growing season (gallons per acre) in the absence of soil and/or tissue analysis.

MAXIMUM SUGGESTED APPLICATION RATE IN GALLONS PER ACRE
